INTRODUCTION:

We, the students of II B.SC. Chemistry – B had been taken for village visit on 5th December 2019 to the village Ayyampalayam. We performed few awareness programs on the following topics:

- Swachh bharat at temple
- Swachh bharat at street
- Orientation on Road safety rules

TEAM -1: SWACHH BHARAT AT TEMPLE:

Cleanliness is next to Godliness means cleanliness leads the way to godliness or goodness. Through the practice of the proper cleanliness we can keep ourselves physically and mentally clean which really make us good, civilized and healthy human being. Cleanliness brings feeling of physical, mental and social well being and helps to make good personality and thus good impression on others. Cleanliness shows clean character of a person through his/her clean dresses and good personality. People with good character become moral and religious in their life. Cleanliness gives rise to good character by keeping body, mind and soul clean and peaceful. Cleanliness is the responsibility of everyone and they need to maintain the cleanliness and hygiene of their surroundings and themselves. A clean body keeps us healthy

and away from the doctors thus saves us from medical expenses and time loss. Cleanliness brings good and positive thoughts in the mind which slows down the occurrence of diseases.

TEAM-2: SWACHH BHARAT AT STREETS:

Urban surfaces receive waste deposits from natural and human sources, which create a negative visual impact and are identified as potentially significant contributors to water and air pollution. Local councils are usually responsible for the sweeping of roads and footpaths to keep the environment clean and free of litter. Quality controls are useful in order to check whether the services are being executed according to the quantity, quality and performance standards that are provided. In this sense, several factors might affect the efficiency of the management of cleaning and waste collection services; however, only a few contributions are available in the literature on the various aspects associated with the level of street cleanliness. In this paper, the suitability of a Cleanliness

Index has been checked. Results have concluded that the city exhibits a good level of cleanliness, although the standard of cleaning varied from one area to another area.

TEAM-3: ORIENTATION ON ROAD SAFETY RULES:

Road safety is a safety measure to reduce the risk of road accidents and road side injury because of the mistakes of people while driving on the road. We cannot count the daily road side accidents and death of people because of the driving mistakes and lack of following road traffic rules followers. Every person going on the road has risk of injury or death, such as pedestrians, motorists, cyclists, passengers, etc.

Everyone needs to be well aware of the road traffic rules especially children and young people who are at significant road accident risks. According to the statistics (World Health Organization, 2008), it is found that most of the hospitalization cases and leading cause of death are because of the road trauma.

As we all are well aware road accidents, injury and death has been very common now-a-days. People not following the road traffic rules and road safety measures are the main cause of such accidents on the roads. We always hear in the news from by our friends about the road accidents because of the wrong side driving, lack of road safety rules, measures, high speed, drunk driving, etc. Government has made variety of road traffic and road safety rules for everyone using road for their safety and for reducing the number of daily road accidents. We should follow all the rules and regulations such as practising defensive driving, using safety measures, maintaining speed limit, understanding road signs, etc.

VILLAGE VISIT REPORT

DATE: 11/01/2020

PLACE: Thaluthalapatti

On the 11th of January 2020, we visited the village of Thaluthalapatti to help the people by digging a rain water harvesting pond. The students divided themselves into groups and approached the villagers at their homes for the necessary tools such as hand hoe (mammoty), hexagon crowbar (kadaparai) and head pan (satti.) Along with the Rehabilitation students we were divided into five groups. Each group took turns in digging the sand and depositing it at the side.

DEPARTMENT OF VISUAL COMMUNICATION

VILLAGE VISIT REPORT

After lunch, our group gave our best and worked together under the scorching sun for an hour taking turns in digging and depositing the sand for a particular area in the pond. Before boarding the bus, we returned the tools to the respective owners in their houses. This experience was really an eye opener for us. Working hard to bring happiness to other people made us feel happy. We also learnt new things as we worked together as a team.

ONLINE SHOPPING

“IF YOU CAN’T STOP THINKING ABOUT IT... BUY IT”

Online shopping has become a new trend of shopping nowadays and is quickly becoming an important part of lifestyle, due to wide spread internet access by people. E-commerce usage by traders, online shopping has seen a massive growth in recent years. The students went and personally interacted with the villagers and they agreed that online shopping is convenient, has more varieties, and better prices and no pressure.

VILLAGE VISIT REPORT

II B.COM - B

INTRODUCTION

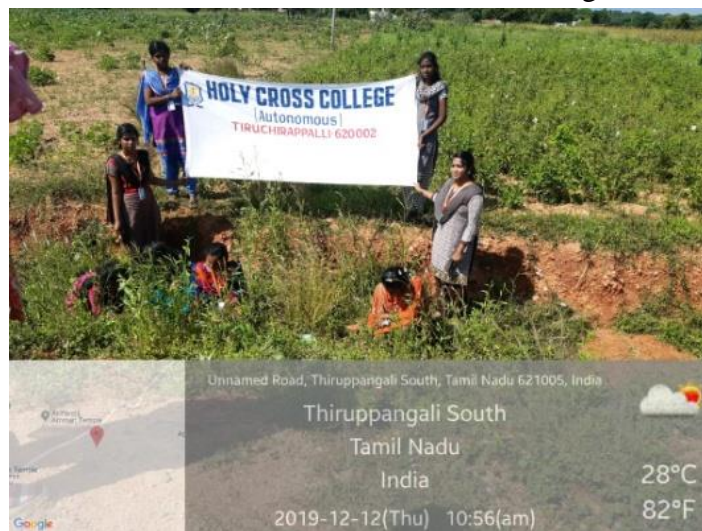

On 12.12.2019 (Tuesday) we started our bus at 9.30 am to Valmanapalayam, Kelur. We reached Kelur approximately at 10.30 am. Our aim is to interact with the people who belongs to Valmanapalayam, Kelur so that they may feel comfortable with us. We planned to enrich greenery by planting seed balls. We decided to generate awareness about the warning signs and health issues.

PLANTING SEED BALLS

As soon as we got down the bus, we started to walk through the paddy fields. This made us to feel how was the condition of agriculture. We divided seed balls in groups and started planting it. Seed balls, also known as "earth balls" and consists of variety of different seeds rolled within a ball of clay, preferably volcanic pyroclastic red clay. Various additives may be included, such as humus or compost.

STEPS

- 1) Mix the soil, clay and one part water thoroughly. There should be no lumps.
- 2) Add seeds.
- 3) Take small bits of the clay mixture and roll into ball about one inch in diameter.
- 4) Dry seed balls for 24-48 hours in a shady place before sowing or storing.
- 5) The last step in how to make flower, seed balls is sowing them.

AWARENESS

Then we went to school. There we met students. We communicated with them to spread awareness about health hygiene, good touch and bad touch. We were open and kind to them while teaching them good touch and bad touch. We insisted them they are the owners of their body and we conveyed that in a language which is easily approachable to them. We made the complex thoughts into simpler one so that the kids were actively listening without any hesitation. Then we explained through various examples what good and bad touch is and we educate them to say strictly "no" in discomforting situations.

BIRTHDAY CELEBRATION

We enlarged their happiness by celebrating the special occasions of the students and villagers. By doing these activities we became very close to them and they treated us one among them. After this incident they felt very happy because they never rejoiced like this before. We gathered all the peoples of the village in a place and it became the celebration of the villagers.

TRAFFIC RULES

Be patient to stay safe. Follow **Traffic Signals** – Pay attention to and obey stop signs, **traffic** lights, yield signs, and other **traffic** signals. Respect Yellow Lights – Remember this means slow down and prepare to stop, not hit the gas and speed through the intersection.

HANDWASHING

Hand washing, also known as hand hygiene, is the act of cleaning hands for the purpose of removing soil, dirt, and microorganisms. If water and soap is not available, hands can be cleaned with ash. Medical hand hygiene refers to hygiene practices related to medical procedures.

1. Wet your hands with **clean**, running **water** (warm or cold), turn off the tap, and apply soap.
2. Lather your hands by rubbing them together with the soap. ...
3. Scrub your hands for at least 20 seconds. ...
4. Rinse your hands well under **clean**, running **water**.

DEPARTMENT OF COMMERCE

(A -Section)

Date of Village Visit	11-12-2019
Village Name	Valmanapalayam-Melur
No of Students	48

Introduction:

As a part of curriculum we went for a village visit to Valmanapalayam-Melur on 11.12.2019

Activity performed:

- We were divided into two. One group were asked to dig sand. And another were asked to pick up stones...
- We done with rain water harvesting under 6feet.
- We explained about rain water harvesting and how to protect it.
- We explained the school students about how to wash their hands, nails, hair. And how to be clean.
- We explained to elder people about good manure and where to buy it.

Students explained the importance of rain water harvesting to the village people

Students constructed rain water harvesting system in the village

Class experience:

It was a good experience for us to set and know about rain water harvesting.

Suggestions and feedback:

It was a good initiative by our class to make some good changes in the society.

Conclusion:

* Overall it was a good experience we are very happy to have this as a part of our curriculum

Our class visited a Government School in Thiruvashi to create awareness on

- How To Wash Hands
- Good Touch and Bad Touch
- Hygiene and Sanitation
- Climate Change and Water Conservation
- Open Defecation

We had orientation sessions for 1st-9th Standard students. We grouped ourselves into 5 teams and talked about respective topics.

Team 1: How to wash the hands

First we went to Balvadi. There we taught the children how to wash their hands and when to wash hands.

We practically explained to them by showing how to wash the hands because children often used to play with sand and their hands will be dirty. If they took something and eat with that dirty hand the germs will affect the health of the children. So we explained about the effects of not washing the hands. Step by step he explained the procedure of washing hands. Children had interaction with us they listened to us careful. Finally we asked the children to wash their hands. The children were very interested and they too enjoyed well.

Team 2: Good Touch and Bad Touch

Good touch bad touch is a very important lesson for both boys and girls. Sexual assault has been at its peak in India and it is important for both the genders to know what is right and wrong.

We explained

- What is good touch and bad touch
- Importance of knowing about sexual violence explained in the most basic manner
- Examples of those affected

We learnt a lot from this activity and how the children received these messages. We created a lot of awareness by also presenting videos.

Team 3: Sanitation and Hygiene

Orientation to 1 to 5 students about self-Sanitation hygiene how to do hand washing? How to wash the clothes, how to maintain nail clean? How to bathe? Awareness was given by our students to the children's.

Hand washing

Keeping hands clean during an emergency helps prevent the spread of germs. If your tap water is not safe to use, wash your hands with soap and water that has been made safe to use. See the hand washing method below for more information on how to keep hands clean during an emergency.

How should you wash your hands?

- **Wet** your hands with clean, running water (warm or cold), turn off the tap, and apply soap.
- **Lather** your hands by rubbing them together with the soap. Be sure to lather the backs of your hands, between your fingers, and under your nails.
- **Scrub** your hands for at least 20 seconds. Need a timer? Hum the “Happy Birthday” song from beginning to end twice.
- **Rinse** your hands well under clean, running water.
- **Dry** your hands using a clean towel or air dry them.

Bathing

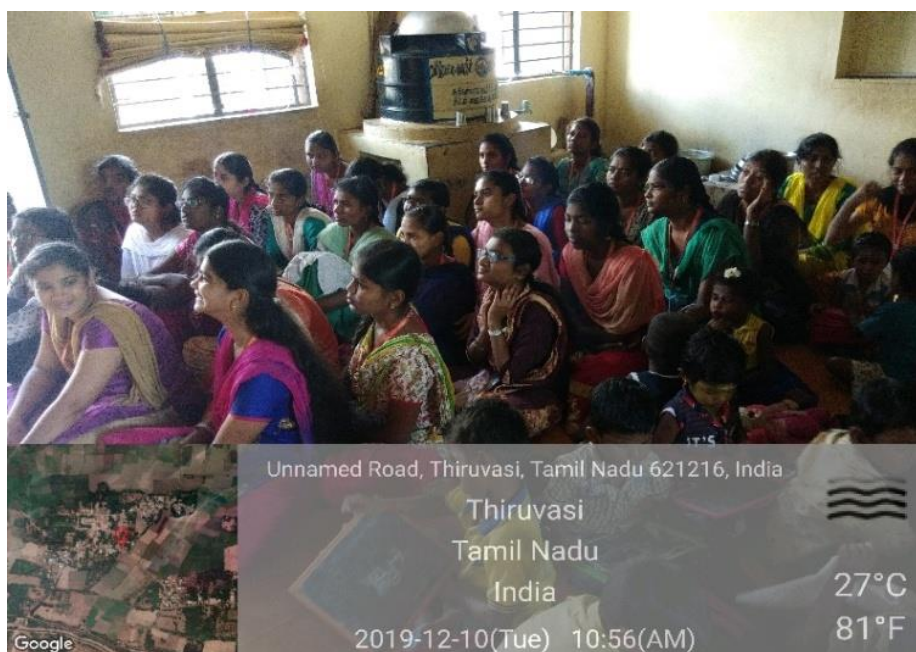

Bathing or showering after a water-related emergency should only be done with clean, safe water. Sometimes water that is not safe to drink can be used for bathing, but be careful not to swallow any water or get it in your eyes. Do not bathe in water that may be contaminated with sewage or toxic chemicals. This includes rivers, streams, or lakes that are contaminated by flood water.

If you have a drinking water well, listen to your local health authorities for advice on using your well water for showering bathing. If extensive flooding has occurred or you suspect that your well may be contaminated, contact your local, state, or tribal health department for specific advice on well testing and disinfection

Team 4:Dental Hygiene

Brushing your teeth after a water-related emergency should only be done with clean, safe water. Listen to local authorities to find out if tap water is safe to use.
