## PAPER PRESENTATION

*Winner's*

### THE FUTURE OF GREEN IT

Preetha S, *III B.Sc CS*

Priya Lakshmi S, *III B.Sc CS*

**Abstract:** Green computing (also known as green IT or sustainable IT) is the design, manufacture, use and disposal of computers, chips, other technology components and peripherals in a way that limits the harmful impact on the environment. Green computing is the study and practice of efficient and Eco-friendly computing. In recent years, companies in the computer industry have come to realize that going green is in their best interest, both in terms of public relations and reducing costs. The goals are similar to green chemistry; reduce the use of hazardous materials, maximize energy efficiency during the product's lifetime, and promote recyclability or biodegradability of defunct products and factory waste. The principle behind energy efficient coding is to save power by getting software to make less use of the hardware, rather than continuing to run the same code on hardware that uses less power. This article helps to identify key issues relevant to green computing and evaluate different approaches to these

problems; and also the different implementation of Green Computing. The plan towards green IT should include new electronic products and services with optimum efficiency and all possible options towards energy savings.

## **PAPER PRESENTATION**

*Runner's*

### **FINANCIAL INTELLIGENCE**

NashrinFathima.B, *II B.Sc CS*

HepshibaSherly.P.A, *II B.Sc CS*

**Abstract:** Artificial Intelligence in banking and finance services has become drives for enhanced customer services, reduced operational costs and increased operational efficiency. Machine Learning and Artificial Intelligence applications in the financial sector have been thriving in the recent past. Their immense power has been harnessed in these institutions to offer business solutions in front end and back end processes to create efficiency and improve customer experience. This paper compares the AI products such as Email bot, Document bot and Chat bot under the financial and banking sector and will lay bare the applications of Machine Learning and Artificial Intelligence and evaluate their utility in different banking industry functional areas and frame how these institutions effectively use computational intelligence to improve their business. While traditional banking institutions are quickly catching up with the computational intelligence technologies with products like Chat bot, which seem to have embrace Artificial Intelligence a long time ago, plays a critical role through its

innovation and contribute substantially to financial intelligence. In conclusion, we can aptly say that Machine Learning and Artificial Intelligence technologies are taking over the banking sector, and it seems like there's nothing we can do about it.

## SMART INDIA HACKATHON 2022

In order to make development a comprehensive mass movement and innovate on all fronts, MHRD, AICTE, i4c and Persistent Systems have come together to organise Smart India Hackathon (SIH) 2019 - a unique Open Innovation Model for identifying new and disruptive technology innovations to solve the challenges faced in our country. It's a non-stop product development competition, where problem statements are posed to technology students for innovative solutions.

A team of six members have been selected under student innovation category for the Grand Finale to be held on 2<sup>nd</sup> and 3<sup>rd</sup> of March 2019. The team submitted an idea of *Live Bus Tracking* by incorporating the Internet of Things and Mobile App technologies. The idea is to track the arrival time, departure time and location of the normal buses in rural areas. The team members comprise of
